A conventional ultrasonic signal detecting apparatus is arranged to have a plurality of ultrasonic transducers and generate a heart beat signal by synthesizing the signals outputted from the transducers. A conventional apparatus is also arranged to multiply the signal by a factor of n to increase the signal strength. The conventional apparatus is, however, disadvantageous in that it necessitates an extremely complicated circuit structure for multiplying the signal by the factor of n since the output of the transducer is a low-level signal.

It has even been said that the word derives from the Irish 'críocht', 'trouble', in reference to the fact that cricketers would play while living in the countryside in a pleasant, tranquil setting. Cricket is the oldest of all major professional sports. It is played in the UK and Ireland, as well as in Australia, Canada, New Zealand, the West Indies, India, Pakistan, Sri Lanka, South Africa, Zimbabwe and Afghanistan. It is recognised by the International Cricket Council as the official international game. Where and how Today cricket is played on a patchwork of grounds — largely in the UK — where the likes of W. G. Grace, who invented the sport, appeared and played more than 160 years ago. The sport originated in England in the 18th century, but its popularity spread to Australia and India with migrants from the UK.
