SQL Server Data Tools for Visual Studio. SQL Server Data Tools provides an integrated environment for. or any edition of SQL Server. Data sources include SQL Server databases, SQL Server Analysis Services tables, and.

Q: React Hook useEffect running multiple times I have this useEffect and it's being used for accessing input values for another component in a form so that i can map over them to create a data object. My problem is that the useEffect runs multiple times (probably because of the async/await)

example of this issue useEffect(() => { const { toggleFormModal } = props; const [{ title, text }] = useFormFields(props, 'title', 'text'); const { formModal : { open, close, prevOpen, nextOpen } } = props; if (open) { const title = nextOpen.title; const text = nextOpen.text; props.setState({ title, text }); } }, []); So first it sets the state title of the current item and then it works its way down to the next item and then sets the text property of that item. A: It is running multiple times because you

A: If you're going to install SSMS, you'll need

to download the appropriate 64-bit version (see the second table at the link you provided), as the 32-bit version will not work on 64-bit operating systems. Q: Can I programmatically add new columns to a gridview? I have a GridView which renders a list of data from my database. I have a product with many accessories and I want to add a checkbox column to my GridView. So I start building up the GridView `grid_array[0] = new GridView(); grid_array[0].RenderControl(HtmlTextWriter.Create(wtr));` My intention is to add one checkbox column which is checked or not if(`checkProduct(productID)`) { `grid_array[1] = new CheckBox(); grid_array[1].Checked = true; } else { grid_array[1] = new CheckBox(); grid_array[1].Checked = false; }` So all I'm doing is setting the checkbox to check or uncheck it's own row. This does not allow me to add another column to this particular row. So I have to generate another blank row. Which is adding a blank row to the end of my gridview. Is there a way to dynamically add

a column to this row? A: Here is what I use in lieu of GridView.Columns collection. It's very simple. Takes a collection, and adds a couple of columns, and optionally a second row.

```
public static partial class GridViewExtensions
{
    public static GridView WrapWithItems(this
        GridView grid, IEnumerable items) {
        var
        gridview = grid as GridView;
        var columns =
            new List();
    }
}
```
