How to check if your Google Chrome browser is behind a proxy: Use this link for a step-by-step guide for Chrome and Firefox: Check if proxy is enabled: Click the menu icon (three horizontal dots) at the top right of your browser. Select Settings, then Connection Settings. In the Connection Settings screen, scroll down to the Proxy section. If you are prompted for a proxy, click the "Manual proxy configuration" button. In the box next to "Manual proxy configuration" should be a check box you can select that says "Enable proxy." If not, click the button to enable the proxy. Select the check box next to "Automatically detect my proxy settings." Click the "OK" button to save your changes. Steps to check if the proxy is listed in the Chrome options for Automatic proxy configuration: Open the Chrome menu on your browser. Select Settings. Select Show advanced settings. Scroll down to the Connection section. Under the LAN (ethernet) heading, click Change proxy settings. In the Dialog box that appears, click the Advanced button. Scroll down to the Global section. In the Connections section, click the Automatic Proxy Configuration button. In the box that appears, select "Include the following IPs (separated by comma)". Click the Advanced button. Scroll down to the IPv4 section. In the Global IPv4 section, click the Update button. Your current proxy addresses are listed. If the proxy you want to use is listed, select it. Otherwise, clear the "Include the following IPs" field. In the box that appears, type the proxy address you want to use. Click the Update button. Steps to check if proxy is listed in the Chrome options for Automatic proxy configuration: Open the Chrome menu on your browser. Select Settings. Select Show advanced settings. Scroll down to the Connection section. Under the LAN (ethernet) heading, click Change proxy settings. In the Dialog box that appears, select the "Include the following IPs (separated by comma)" option
