It creates and manages tunnels between two or more hosts or virtual hosts, and allows for the configuration of a distributed firewall. It is part of a set of three related software projects named Siggen (IPsec), SGen (SCTP), and SGen-DB (iSCSI). Prong claims to use less CPU and memory than other IPsec software, while it maintains a similar level of performance. Prong supports Linux, Solaris, and Windows operating systems. Features Prong provides an interface for creating and managing IPsec tunnels. It uses MPPE encryption, and also includes TLS, SCTP, and iSCSI traffic encryption support. It is designed to be run on virtual machines to provide a low-cost, easily maintained solution for firewall users. As part of its KVM support, the virtual machines and virtual routers can be easily and quickly managed, tested, and monitored using a web-based interface. Prong is distributed as a source code package, along with a configuration file. It is not distributed as a service, and requires the installation of a front-end connection manager, such as ISEC (based on IPTABLES) or FirePond (based on Mpm). Prong has been developed and released by Digital River. Prong is designed to provide a secure IPSEC VPN solution for a cloud computing environment.
