technician. The most common use of AutoCAD is for 2D architectural drawing and drafting, though it can also be used for 3D architectural, mechanical, and electrical designs. AutoCAD comes with drawing and modeling tools to make it very easy to draw and create different components. However, this is an extremely complex CAD software, and so, its learning curve is steep and might take a long time to get familiar with the program. For professional use, AutoCAD costs around $1,000. However, the more complicated features can be used for free as long as you are the sole user of AutoCAD and do not share the file with anyone else. In addition, this software is primarily used for the design of large, complex mechanical and architectural projects. However, it is also very commonly used for smaller, simpler projects, such as designing the details of clothing, craft projects, and even jewelry. It is important to know that AutoCAD comes in two versions: The Standard Edition The Standard Edition is just like any other good CAD program that is used to design, draft, and simulate, etc. The Professional Edition The Professional Edition is far more advanced than the Standard Edition and comes with a lot more advanced features. The Professional Edition can be installed on either Windows or Mac platforms, and is very common in businesses and factories that use AutoCAD for work to get things done faster and with more efficiency. AutoCAD is compatible with many different types of software and hardware, including: AutoCAD Software AutoCAD LT AutoCAD 360 AutoCAD Architecture AutoCAD LT Architecture AutoCAD Architecture Design and Drafting AutoCAD Architectural AutoCAD Architecture Drafting AutoCAD Design AutoCAD Design & Drafting

Methods Primary care doctors, aged under 68 years, completed a five-question test based on a screening questionnaire for dementia and depression. They were then evaluated using the Mini-Mental State Examination (MMSE), the Geriatric Depression Scale (GDS-15), and the Geriatric Functional Comorbidity Index (GFI) before the doctors completed a clinical neurological examination. The index was used as the reference standard. Participants were identified using Medicare records. Sensitivity and specificity of the test were calculated. Results The test was most sensitive (77%) and specific (78 ca3bfb1094
