AutoCAD is used by architects, engineers, drafters, illustrators and many other professional design professionals. AutoCAD has recently been designed to support the needs of architecture, interior and furniture design, product design, 3D model/rendering, graphics design, and real estate and city planning. What is AutoCAD? AutoCAD is a software application for designing and drafting 2D and 3D objects, which is available as a desktop application and as a mobile/web application. It is developed and marketed by Autodesk. AutoCAD was first released in 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. Autodesk's AutoCAD software is the most widely used application for 2D drafting in the world. With over 16 million users and over 50,000 new users signing up each month, AutoCAD is recognized as one of the world's best software applications. Who uses AutoCAD? I've noticed that everyone's name tag always says something like -user:xxxx- on mine it only says 4-xxxx. A: If you're looking at the Recent Questions list, you'll see a pencil icon. Click that pencil icon to see more information. I'm not sure what "more information" means, but it's generally a link to some sort of information about your account. If you click the username icon, you'll get the following dialog: This dialog shows you some information about your profile, including the number of days you've been active on the site, and the days of the week in which you last visited. It's possible that your name was added to your profile with the option to make it visible to others, but without changing its content. I'd suggest double-checking that this is the case for you, and adding the contents you want to your profile. Q: Using C++ and Boost in VS2010 We're converting our code from 2008 (Visual Studio 2008) to 2010 (Visual Studio 2010). Among the applications we use, we're using Boost. In 2008, it was a straight conversion of the source code. In 2010, we're adding our own set of headers to the project. The problem is that every boost header requires that the boost c++ redistributable package be installed. This is not an option for us. We're using the boost::serialization library, so that is one of the headers that requires the boost package. Boost is very big, so we can't use the same boost version as 2008. Is there a way to overcome this requirement? We're using C++. A: You'll have to get the 2010 redist package. But you don't have to use all the code in the package. There's af5dca3d97
