Field of the Invention The present invention relates to an image forming apparatus such as a copying machine and a printer, and more particularly, to an image forming apparatus in which a developing apparatus for forming a developer image on a photosensitive medium by a toner is provided. 2. Discussion of the Background In an image forming apparatus such as a copying machine and a printer, an image forming operation is carried out in accordance with a series of image forming steps. Namely, in the image forming apparatus, an electrostatic latent image is formed on a photosensitive medium such as a photosensitive belt or a photosensitive drum by various means, and the electrostatic latent image is developed into a toner image by the developing apparatus. The toner image is thereafter transferred and fixed on a recording medium such as paper. In such a developing apparatus, a toner held in a toner container is fed from the toner container to a developing portion by using a feed screw which is disposed in the developing portion and rotated and moved in the direction of the rotational axis of the feed screw. The toner is fed from the feed screw to a
