Suppose I have two columns of data in excel. I want to be able to flag the first non-null value in Column A, if Column A contains a value that is greater than the value in Column B. I can't use

INDEX or MATCH to compare one column to another. That's because this is more complex: in Column A the value in Row 1 is not null. In Column B, the value in Row 1 is null. So the comparison I would like to do is to Flag the row in column A in which the value is not null. In other words I want to compare a non-null value in Column A against a null value in Column B to see if the value in column A is larger than the value in Column B. Any thoughts on how I can do this? Technical Field The present invention relates to an apparatus for generating nitric oxide (NO) and a method for using the apparatus in practice and, more particularly, to an apparatus for generating NO, which is adapted to produce NO

from an aqueous solution containing ammonia and a transition metal salt, and a method for using the apparatus in practice.

2. Description of Related Art

Nitric oxide (NO) is a kind of oxygen-containing free radical material. NO is generally considered as an inhibitory factor of bacteria. Therefore, NO is widely used for medical purposes, especially for the use in killing bacteria in water. For example, NO is often used to disinfect water or air. NO is a biocidal agent, and a kind of small inorganic free radical. It can have toxic effects on both animals and plants at high doses. For example, exposure to high doses (25-100 ppm) of NO 6d1f23a050
