Fanuc Pmc Eprom Convert Tool __FULL__

[Download](#)

Originally the EPROMs in use here are already used by the manufacturer (AMD), and are branded as Amiga C-EPROM chips. Unfortunately, they are just slightly modified and ready for use with the Amiga. One of the reasons for this cheap original brand of EPROM is that AMD wants to use the part number of Amiga C-EPROM to be used with both Amiga BIOS and PowerPC. If you want to go the short way to convert an EPROM for the Amiga, the first step is to find an Amiga with a broken or dead EPROM chip. To read the contents of the chip, you need a special device to program the chip. The Device Manager application lists a few possible devices to test. The photo above shows the specs of an "AMD EP400" looking chip. However, there are other models of EPROM chips, and it might help to check if any of the listed devices are able to read the chip. Although the EPROM chip is dead, it may still have some contents. Usually there is a factory program that is just a couple of KB in size. However, if not, you can still retrieve the contents of the chip, which is usually the byte of the first few KB. Depending on the chip, there may be other content on the chip. One of the chips has an additional 144KB of data, and the original Amiga A-EPROMs had much more data. During a testing of this existing chip I realized that the chip is also available for use with Amiga systems.
