What is a user to do with an unlocked ThinkPad? It may sit idle for hours or days. So far, my only plan has been to use it as a communications and file sharing device. It's a great tool for that, as it comes with fast cellular connectivity built in. If you're asking about a laptop with a full-sized keyboard, then you're definitely after one of the older models. But if you can afford a new one, then I'd recommend the ThinkPad X1 Carbon. The hinge is great, with only the minimal gap between the keyboard and the display. It's a lot lighter than similar models and the keyboard is just as nice, if not better. The ThinkPad X1 Yoga is also great, and I'd argue it's the better of the two, if only because it has a traditional screen. If you're after a ThinkPad and you want the newest hardware, the X1 Yoga is the one for you. It has a full-sized keyboard, an excellent display, an AMD processor, and a battery that's good for up to 14 hours of use. This is the ThinkPad that can be used in your lap for hours, but it's also the ThinkPad you can take into bed with 2edc1e01e8

However, while this basic philosophy still applies, Lenovo has finally started to change its branding strategy in order to appeal to a younger generation of consumers who prioritize sleek, modern design, as opposed to the business focus of the ThinkPad. While the T480s and T490s are definitely not going to become the ThinkPads of the future, they do bring some welcome changes to the ThinkPad line that were not originally present. These include an aluminum body and up to a Quad-Core i7 processor for increased performance, and a streamlined design that will suit the needs of younger users who are used to modern designs.
