iOpener is a compact application that aims to help you use the songs from your iTunes library on other devices. If you want to use the purchased music on a portable media player or phone, you need to remove the encryption used by Apple. While the DRM encryption is a very good method to protect the content from being used without authorization by other users, it can be really annoying when you want to listen to your music on another player. The program can handle most of the AAC files downloaded on your computer in the iTunes library. This tool can help you create a copy of the audio files from your library without the DRM protection. The files are saved in the same folder as the original and can be used on other devices. If you want to save disk space you can process the downloaded file directly and disable the option to save a copy. The program is lightweight and requires insignificant resources to convert your files. The operation takes only a few seconds for every song that you have to convert. Unfortunately you cannot select the songs that are processed since the first time you run the program it removes the protection for the entire library. The process only removes the protection and does not change the file format or the bitrate. Therefore, the sound quality is untouched and the interface of the program is easy to use. You only need to click one button to scan the library and to process the newly added tracks. iOpener supports the following formats: AAC, APE, FLAC, WMA, MP3, WAV and OGG. iOpener Software Requirements: Windows XP / Vista / 7 / 8 / 8.1 / 10 (32-bit and 64-bit) .NET Framework 4.5 or higher iOpener is a compact application that aims to help you use the songs from your iTunes library on other devices. You can use it to convert files with various extensions and the conversion can be done in batch or automatically. The program has a command line based interface and will display a list of available options when you type any of the commands. It requires a command line window to be available in order to be used.
