## What's New in the?

Purple Parrot SimpleGrid1 ActiveX Control, when placed on a form, allows you to present data in a grid format similar to MSFlexGrid, but with a lot of new capabilities such as a display of total and selected rows. SimpleGrid1 is an ActiveX component that allows you to present data in grid format. Other features include the ability to add a checkbox column, the ability to select multiple rows, and reduced coding requirements by using CellData,

CellBackColor, and CellForeColor properties. Limitations: Free usage for 30 days Q: phpunit can't include the same file twice I'm running phpunit on a cron job. When I run phpunit directly from the shell it works fine and I don't get any errors. When I run the script from cron the second time I run it it gives the error Parse error: syntax error, unexpected '}' in [path] There is nothing different between the files that cause it to error. I'm trying to run this on an ubuntu server and running on 2 cores. I have another script that has a few include's and it works fine. There are no different include types I would just like to know what causes this and if it is a bug or is the server doing something wrong. I am running this on ubuntu server and I can see that it only runs once when I run it manually, and the second time it says this. I can't see any difference between the files that the unit tests are using and the ones that work that is causing the error. I have removed any include paths in the top of the files that are being ran in the unit test and still the error occurs A: I found the issue. I had a php script that was included in the unit tests. This php script did have a closing brace. This lead to the first include to end before the second could start and thus the error. I discovered this because one of the unit tests had another include in it and didn't have any problems, I added the code to the file that had the problem and this was the error. I have no idea why this would happen, but now I know what to look for next time. Thanks to all that helped. Semantic category assignment affects sustained and transient attention: a case study. The role of semantic categories in the allocation of attention was investigated in a patient (AH) who suffered damage to the right anterior and posterior temporo-parietal junction (TPJ). She was asked to look for a target among distractors belonging to two different semantic categories. The target was presented in a square window (side, 5 degrees ) that was either a color-shape or a color-color. Participants were asked to ignore the distractors and to respond

## **System Requirements For SimpleGrid1:**

Windows 10, Windows 8, Windows 7 (32/64 bit), Vista (32/64 bit), XP (32/64 bit) Mac OS X 10.9 or later Minimum System Requirements: Windows 10, Windows 8, Windows 7 (32/64 bit), Vista (32/64 bit), XP (32/64 bit) Mac OS X 10.9 or later Microsoft Windows: Windows Vista Windows XP Windows 7 Windows
