If loading up an image for reuse is a thing you do often, then this feature is a real boon. When you have a selection, you can simply duplicate it and then make changes to all of them at once. Of course, you can also just Select All, but that's slow and not very easy once you get more than about three items. So you're better off duplicating them and then making adjustments one at a time. It's also a useful way to start up new documents, so you don't have to start from scratch. I also liked the live preview of adjustments. It makes me more likely to make changes because I can see them on my screen. I also like the ability to add and subtract paths to a selection, for the same reason. These features also make exporting easier, but unfortunately, there's no export to Photoshop design document with it yet. While it took a while for apps to figure out the iPad Pro's real estate, Photoshop has been able to make the most of it. Its interface is not really different on the iPad Pro, but it is much smaller. Combined with the high-resolution display, it's like you're using a 4K display. The differences are subtle. For instance, the rectangles in the Scene Options menu are wider, so you can see more of the image. And the dialog boxes are smaller. Details, setting, and photo manipulation are what Photoshop is all about. The hundreds of settings you choose for an image, as well as how you manipulate and edit the image can make a difference between having a good shot or a great shot. You see an example of this in the recent introduction of Screen Base, which works with images that have no shadows. He then also demonstrates how a still life can be photographed rapidly using Screen Off. You can now resize, rotate, and distort an image in a single operation using the new Liquify filter. If you don't want to use the free trial, you should consider signing up for a Creative Cloud account. You will get more for your money and can download the software for up to two computers at once. Had you known about a few of Photoshop's features in the past, you would have saved time and money. Best for amateur/serious users.
Best for amateurs.
