While Adobe has tried to mitigate the negative impact of their new business model by offering offline editing, it's just not apples and apples. Various services (such as CloudArt ) allow you to host your files in an Internet-accessible cloud location (and keep your personal data private), and host comments for you. It's entirely possible for anyone to create such a service, and offer privacy and cost-cutting to the masses. It's harder to say whether Creative is going to succeed in transforming Photoshop into a subscription service, but any company like Adobe that has a global and entrenched brand name is going to have an uphill battle. Bottom line: Without the cloud, most of these changes don't really help you. If you're willing to pay \$5 per month for Photoshop, there are still much better ways to go about it.

If you want to tell your friends, you might as well use Facebook to do so. A useful thing Facebook can do with your photos is give them some context, even if the photo itself isn't that interesting. If you have no album set up for these kinds of photos, Facebook will choose one for you and add it to any posts that include it. If you have an album instead, your friends can give it a thumbs up or thumb down. Don't suck at finding the right album though. If you don't have any albums organized, you will be shown a list of your friends and artists albums. If you really have no idea what a given photo is about, a "generate Album" button will do the trick.

4. Look at your studio. If you have a limited budget for a studio/photoshoot-- you're not going to get exactly what you expected. A lack of budget inevitably means that you will need to purchase less-than-ideal gear, which can frequently mean a poorly lit studio and higher production costs. Be

prepared for this from the start and be sure to work within your budget. Also, it's not a bad thing to go to a studio with great light. If the light is good, the camera will make the picture amazing; if the light is shoddy, it may try to fight a losing battle and make your pictures look bad. 5. Know your environment. Even if you are shooting in the best studio and getting the most wonderful equipment, you're going to shoot differently in a busy bustling studio compared to shooting in the desert on a beautiful mountaintop. If you want to make beautiful, impressive images, you're going to have to spend a lot of time and energy learning about your environment. In this case, the answer is as simple as it is meaningful: **design and manage multiple versions**. The idea being that you don't have to wait until you get it perfect. Get some key concepts down on paper (or on the screen) to get inspired, and then make changes before you publish. And to make those changes a reality, you need a WYSIWYG editor.
