According to a report from **CNET**, Adobe's photo editing and design software will be coming to the iPad a little sooner than people think -- in that the software is in the final stages of certification to be released on January 25. **Feature #3: Layers.** I - and many other Lightroom users - swear by the use of layers. Anyone trying to learn a new game, such as Adobe Photoshop, will find that direct access to everything a tool does would be an advantage. Fortunately, Photoshop hasn't changed much in this regard. The layers panel is as intuitive as ever, and its UI has been improved slightly. You can interact with layers in many more ways - including the ability to add, modify and delete them. Layers also don't appear as a background anymore. This allows you to see and edit the image more clearly. That is to say, you can safely open a duplicate layer, which only appears as a transparent section for you to work on. You can then delete the duplicate layer if you wish. If you're interested in saving layers for later use, you can save a set of layers in a Stacked Layers Layers Cache panel. You can stack up to 32 layers in memory. All major assets in an image are automatically recognized, and you can clean them up by smartly applying filters and effects. There are over 20 new actions and presets created by Adobe, the most powerful being the new Birthday portrait preset.
