A new feature called Live Photo Lightroom has arrived, with two main goals: to add a new way to edit, preview, develop and monitor images for post-processing, and to make it easier to use Lightroom for both still and video images. With the new tab, you can easily view and take live action shots, or "live view," with the success of the Aria camera, as well as watch them being edited with the same speed as still images. The following options are available in the Edit→Preferences tab: I am an Applefanboy, but I don't really like Adobe software — until Mac users got Photoshop. If you want the very best software, go with Photoshop and Lightroom — but Photoshop isn't cheap, Apple charges for them, and you need to buy a full-blown computer to run them. I love Photoshop. I use it for the same purpose that others use Illustrator: I design, I layout, and sometimes I draw with it. But I don't conscientiously use it for photos, or even many other types of graphics. I'd rather stick with GIMP and its plugins. When the content-creation market carved out limited spots for me, I had to get creative - or, as they say, "creative". The best reason to get Adobe Photoshop is that free and professional versions of this software are not available. Adobe is also good at forcing prices down on the software. If you are unhappy with Photoshop, or if you are looking to migrate to a photo editor, Photoshop is the only choice. Don't just buy it because it is cheap. It isn't life-changing and it's not really worth the cost.

For starters, Share for Review is a new feature in Photoshop that allows users to collaborate on Photoshop projects onscreen, even while offline. Share for Review simplifies the process of sharing updates and making contributions, with the option to approve updates before they appear publicly or simply ask a contributor to start new tasks and return to them. Users can also set their preferences on how frequently updates are sent, which is especially valuable when working with clients who may need to approve updates at a later time. Additionally, new app-based collaboration tools inside the Photoshop desktop app broaden the way users can collaborate with one another. One-click Merge lets users collaborate seamlessly, enabling a single mouse click to merge multiple elements; Adobe is designed to limit accidentally modifying shared assets, resulting in cleaner collaboration. On the Mac, the Merge tool works in the exact same way as the one-click Merge tool for Windows, enabling non-experts to merge and save their edits without them having to master the intricacies of resizing. Finally, with the new ability to view changes inline, images appear animated as users make edits to help shape the creative flow. “Beyond the desktop, people have become more and more creative through mobile devices,” said Scott Snibbe, vice president of Apps at Adobe. “With Adobe Sensei AI, we’re enabling Photoshop to work more like a creative finishing assistant on any screen. Whether it’s reviewing a photo for retouching, inserting a placeholder for a missing person, or providing contextual information on a sneaker from an online retailer—with Adobe Sensei AI, Photoshop can increase the efficiency of the creative process for all kinds of users and projects.” With the new AI technology, Photoshop will gain new knowledge over time to become more efficient at supporting creative projects through predictive coding, contextual analysis and image recognition. Adobe Sensei AI will also provide directions for users to step into new experiences, and is based on humans’ unique ability to recognize objects and create meaning from image content.
